

Driven by industry. EngD in Transport and the Environment

The Southampton Engineering Doctorate (EngD) in *Transport and the Environment*, in the Industry Doctoral Training Centre (IDTC), combines technical and management training with PhD level research in collaboration with an industry sponsor. Projects cover a wide range of topics in the interrelated, and globally critical, area of transport and its impact on the environment.

Benefits to students include: training in advanced technical topics; management courses that can count towards an MBA; the intellectual challenge of PhD level research; working in close collaboration with industry and commerce; enhanced tax-free stipends.

Benefits to sponsors include: linkage with world-class research groups and top quality graduates dedicated to sponsors' projects; direct access to potential high calibre employees and career development opportunities for existing staff.
